

## Manual Rod Puller

This is a device that pulls out a rod that has been pierced into the ground during a Screw Weight Sounding test(The former Swedish Sounding test).

### FEATURES

1. The pull-out is a dead-cam system,the more resistance there is, the greater the chucking force against the rod.
2. A large pull-out volume can be achieved with a single stroke. Continuous pulling of 1000 kg or more is also possible.
3. 2-step stroke adjustment. In case of soft ground, it can be pulled out quickly and with large strokes.
4. Simple structure and can be disassembled into small pieces. Easy to transport and assemble.
5. The low price is achieved because of the lean mechanism and structure.
